***** EXAMINATION *****

FIELD ASTRONOMY

1. **A type of time is:**
 - a) solar
 - b) zone
 - c) Greenwich mean time
 - d) All of the above

2. **The need for an astronomic observation may occur when:**
 - a) there are no NGS monuments in the area
 - b) there are NGS monuments in the area
 - c) using NAVSTAR GPS equipment
 - d) Both b and c

3. **When the sun is directly over a meridian,**
 - a) the zone time is six hours
 - b) it is noon time, local apparent time, on the meridian 180 degrees away
 - c) it is noon time plus a slight correction on that meridian
 - d) None of the above

4. **Another name for zone time is:**
 - a) apparent time
 - b) sidereal time
 - c) standard time
 - d) local time

5. **The difference in time between a particular zone and the adjacent zone:**
 - a) is the declination
 - b) is altitude
 - c) is one hour
 - d) is seven and one-half degrees

6. **Time is later as you move:**
 - a) eastward
 - b) westward
 - c) northward
 - d) southward

7. **The time listed in most computational tables for celestial observations is:**
- a) apparent time
 - b) zone time
 - c) Greenwich mean time
 - d) All of the above
8. **To determine the zone description for any point on the earth,**
- a) divide the longitude by 15 and add 1 if the remainder > 7.5 degrees
 - b) add the longitude to 360 degrees
 - c) multiply the longitude by 15
 - d) None of the above
9. **The zone description of 68 degrees west is:**
- a) 3
 - b) 4
 - c) 5
 - d) 6
10. **The zone description of 61 degrees west is:**
- a) 3
 - b) 4
 - c) 5
 - d) 6
11. **The zone description of 91 degrees west is:**
- a) 3
 - b) 4
 - c) 5
 - d) 6
12. **The zone time is 10 h 5 m 8 s and the longitude is 60 degrees west.**
- a) The GMT of the observation is 14 h 5 m 8 s
 - b) The GMT of the observation is 15 h 5 m 8 s
 - c) The GMT of the observation is 5 h 54 m 52 s
 - d) The GMT of the observation is 4 h 54 m 52 s
13. **The zone time is 4 h 9 m 18 s and the longitude is 40 degrees west.**
- a) The GMT of the observation is 6 h 9 m 18 s
 - b) The GMT of the observation is 7 h 9 m 18 s
 - c) The GMT of the observation is 1 h 9 m 18 s
 - d) The GMT of the observation is 0 h 9 m 18 s
14. **Time signals are broadcast by:**
- a) NASA
 - b) Greenwich
 - c) the US Naval Observatory
 - d) the US Weather Bureau

15. **Latitude and longitude are used by:**
- a) the terrestrial systems
 - b) the celestial system
 - c) horizon system
 - d) spherical system
16. **Altitude and azimuth are used by:**
- a) the terrestrial systems
 - b) the celestial system
 - c) horizon system
 - d) spherical system
17. **Right ascension and declination are used by:**
- a) the terrestrial systems
 - b) the celestial system
 - c) horizon system
 - d) spherical system
18. **The fundamental reference lines of the terrestrial system are:**
- a) the axis of the earth's rotation and the earth's equator
 - b) the great circle through the equator
 - c) the Greenwich meridian
 - d) All of the above
19. **The equator is:**
- a) a great circle
 - b) equidistant from the poles
 - c) perpendicular to the axis of rotation
 - d) All of the above
20. **A great circle passing through both poles is called a:**
- a) arc of declination
 - b) equator
 - c) meridian
 - d) latitude
21. **A parallel of latitude:**
- a) is on a plane perpendicular to the equator
 - b) great circle
 - c) is on a plane parallel to the equator
 - d) corresponds to a unique meridian
22. **The numerical value of a meridian is:**
- a) the longitude
 - b) the latitude
 - c) the declination
 - d) the right ascension

23. **The conventional symbol for latitude is:**
- a) alpha
 - b) phi
 - c) beta
 - d) delta
24. **The conventional symbol for longitude is:**
- a) pi
 - b) lambda
 - c) phi
 - d) gamma
25. **The conventional symbol for declination is:**
- a) alpha
 - b) lambda
 - c) beta
 - d) delta
26. **The conventional symbol for right ascension is:**
- a) alpha
 - b) lambda
 - c) beta
 - d) delta
27. **Latitudes are expressed in degrees and are measured:**
- a) 0 to 180 degrees north of the equator
 - b) 0 to 180 degrees south of the equator
 - c) 0 to 90 degrees north and 0 to 90 degrees south of the equator
 - d) None of the above
28. **Great circles through the celestial poles are called:**
- a) equatorial circles
 - b) hour circles
 - c) local hour angles
 - d) declination circles
29. **The angle between hour circles is called:**
- a) the hour angle
 - b) the declination
 - c) the latitude
 - d) the meridian
30. **The declination is expressed in degrees similar to:**
- a) the zone time
 - b) the apparent time
 - c) the local time
 - d) latitude

31. **The vernal equinox is also known as the:**
- a) the first point of Ceres
 - b) the first point of Mars
 - c) the first point of Aries
 - d) the eclipse
32. **The vernal equinox cross the equator from south to north on:**
- a) January 15
 - b) March 21
 - c) August 3
 - d) November 16
33. **The vernal equinox moves westward along the equator about:**
- a) 10 seconds per year
 - b) 25 seconds per year
 - c) 40 seconds per year
 - d) 50 seconds per year
34. **Right ascension and declination are:**
- a) independent coordinates of the celestial system
 - b) dependent coordinates of the celestial system
 - c) reciprocal coordinates of the celestial system
 - d) inverted coordinates of the celestial system
35. **The hour angle of a star is measured:**
- a) northward along the celestial equator
 - b) westward along the celestial equator
 - c) southward along the celestial equator
 - d) eastward along the celestial equator
36. **The Greenwich hour angle of the celestial body is increasing:**
- a) northward along the celestial equator
 - b) eastward along the celestial equator
 - c) westward along the celestial equator
 - d) southward along the celestial equator
37. **The direction of gravity passes through:**
- a) the north pole
 - b) the south pole
 - c) the center of the earth
 - d) None of the above
38. **The displacement of the horizon plane is called:**
- a) declination
 - b) sidereal adjustment
 - c) correction for parallax
 - d) None of the above

39. **The altitude of a body is:**
- a) an angular distance of the body
 - b) is the complement of the coaltitude
 - c) is measured along a vertical circle
 - d) All of the above.
40. **The coaltitude is also known as:**
- a) zenith distance
 - b) declination
 - c) nadir
 - d) parallax
41. **The conventional symbol for azimuth is:**
- a) the Greek letter lambda
 - b) the Greek letter phi
 - c) the English letter Z
 - d) the English letter H
42. **The astronomic triangle is formed by:**
- a) the pole, nadir, and zenith
 - b) the pole, zenith, and star
 - c) the star, nadir, and latitude
 - d) the star, latitude, and nadir
43. **The side of the astronomic triangle between the pole and the star is:**
- a) codeclination
 - b) coaltitude
 - c) colatitude
 - d) declination
44. **The side of the astronomic triangle between the pole and the zenith is:**
- a) codeclination
 - b) coaltitude
 - c) colatitude
 - d) declination
45. **The side of the astronomic triangle between the zenith and the star is:**
- a) codeclination
 - b) coaltitude
 - c) colatitude
 - d) declination
46. **The angle of the astronomic triangle at the zenith is the:**
- a) hour angle
 - b) parallactic angle
 - c) zenith angle
 - d) azimuth angle

47. **The angle of the astronomic triangle at the pole is the:**
- a) hour angle
 - b) parallactic angle
 - c) zenith angle
 - d) azimuth angle
48. **The angle of the astronomic triangle at the star is the:**
- a) hour angle
 - b) parallactic angle
 - c) zenith angle
 - d) azimuth angle
49. **The angle least used in computations is the:**
- a) hour angle
 - b) parallactic angle
 - c) zenith angle
 - d) azimuth angle
50. **The formulas required for the solution of the astronomic triangle:**
- a) may be derived from the law of cosines
 - b) may be derived from the sine law
 - c) may be derived from the Pythagorean theorem
 - d) None of the above
51. **At zone time 11 h 22 m 15 s on May 17, 1986 and longitude 91-37-12 W**
- a) the zone description is 4
 - b) the zone description is 5
 - c) the zone description is 6
 - d) the zone description is 7
52. **The GMT of the observation is:**
- a) 15 h 22 m 15 s
 - b) 16 h 22 m 15 s
 - c) 17 h 22 m 15 s
 - d) 18 h 22 m 15 s
53. **For the GMT 17 h 00 m 00 s on May 17, 1986**
- a) the GHA for the sun is 45 degrees 54.8 minutes
 - b) the GHA for the sun is 60 degrees 54.8 minutes
 - c) the GHA for the sun is 75 degrees 54.8 minutes
 - d) the GHA for the sun is 90 degrees 54.7 minutes
54. **For the GMT 17 h 00 m 00 s on May 17, 1986**
- a) the GHA for the moon is 303 degrees 05.5 minutes
 - b) the GHA for the moon is 317 degrees 37.5 minutes
 - c) the GHA for the moon is 332 degrees 09.6 minutes
 - d) the GHA for the moon is 346 degrees 41.6 minutes

55. **The increment for 22 m 15 s for the sun is:**
- a) 5 degrees 33.8 minutes
 - b) 5 degrees 38.0 minutes
 - c) 5 degrees 49.5 minutes
 - d) 5 degrees 52.0 minutes
56. **The increment for 22 m 11 s for Aries is:**
- a) 5 degrees 30.3 minutes
 - b) 5 degrees 31.5 minutes
 - c) 5 degrees 32.8 minutes
 - d) 5 degrees 33.7 minutes
57. **The GHA of the sun at the time in Question 51 is:**
- a) 75 degrees 54.8 minutes
 - b) 81 degrees 28.6 minutes
 - c) 87 degrees 14.6 minutes
 - d) 89 degrees 17.1 minutes
58. **For the GMT 17 h 00 m 00 s on May 17, 1986**
- a) the declination for the sun is N 19 degrees 21.3 minutes
 - b) the declination for the sun is N 19 degrees 22.4 minutes
 - c) the declination for the sun is N 19 degrees 22.6 minutes
 - d) the declination for the sun is N 19 degrees 23.0 minutes
59. **For GHA 327-44-18 and west longitude 98-14-14:**
- a) the LHA is 65-58-32
 - b) the LHA is 229-30-04
 - c) the LHA is 245-58-32
 - d) the LHA is 49-30-04
60. **The least accurate determination of azimuth uses:**
- a) the sun
 - b) Aries
 - c) Polaris
 - d) Mars

Return this page with your answer sheet and a check or money order for \$100 per course. Use one check for each registrant (in your company) taking one or more courses. We accept company checks (if they are your employer's). We do not accept third-party checks or checks outside of your city of residence. Using third-party checks that do not include your name or company name may invalidate your professional development hours being reviewed by an audit process. Add \$5 for same day processing and priority shipping.

Make checks or money orders payable to Geographic Information Systems.
